

BABY ANATOMIC NEST FEATURES

Spavalica
ANATOMSKO
GNEZDO

Težina – 2,1 kg
Size - 70*42*20 cm

'Spavalica' anatomic nest set includes the following:

1. The foundation of the anatomic nest is made up of elastic Polyurethane foam (BIO-Latex)
2. Two fixed-in fitted sheets
3. Waterproof fitted sheet with a zipper
4. Two rollers
5. Safety tummy band
6. Bag for carrying the nest

Adjust the size of the anatomic nest to your child

1. Take the protective fitted sheet off the anatomic nest
2. Position your baby into the nest on her back. When doing this, baby's head should be positioned on the narrow part of the nest, about 5cm below the nest's upper edge.
3. 'Spavalica' logo is on the wider part of the mattress, under child's legs.
4. Attach the roller directly below the baby's bottom. This will keep the baby from sliding down. Child's legs should be slightly lifted upwards.

The set includes 2 rollers:

- The smaller roller is intended for babies weighing up to 4kg.
- For babies weighing over 4kg, we recommend the bigger roller.

5. After adjusting the anatomic nest, put on the fitted sheet on the mattress and put your child in it.

! Babies grow rather fast. This is why it is necessary to adjust the position of the roller by moving it downwards. Child's head must always be near the upper edge of the nest.

Use the band appropriately.

The anatomic nest set also includes a special band. It fixes the baby's position, without limiting her movements.

1. Position the band around the mattress so that the shorter end is opened in your direction.
2. Fasten the long ends of the band with a hook-and-loop fastener.
3. Put the baby in the nest and fasten the short ends with a hook-and-loop fastener. Make sure the band does not tighten the child's tummy or chests.

Safety instructions

Read these instructions before using 'Spavalica' nest. Wrong use of the anatomic nest may harm the baby.

1. Use 'Spavalica' nest separately from other cradles. You may put the nest into a crib. Make sure that the crib's sides are 20cm or more above the nest.

2. Do not use 'Spavalica' nest if some of its parts are broken, torn or missing.

3. Be cautious when your baby first attempts to roll over and do not leave her alone.

4. Do not put 'Spavalica' on high edgeless surfaces. The safest places to put it: in a crib and on the ground covered with a carpet or rug.

5. Do not leave your child unattended in the vicinity of fire or heating devices.

6. When in the nest, your child should be positioned on her/his back and there should be no items near his/her face.

7. Make sure your child's head is positioned 5cm under the nest's upper edge.

Detailed video-instructions can be found on our web site www.spavalica.rs

Advice about using 'Spavalica' nest

1. We recommend that sheets put on 'Spavalica' nest are the ones made especially for it.
2. Bear in mind that a child feels warmer in the nest than on an ordinary mattress, so make sure you do not put too warm clothes on her/him.
3. To encourage child's development, you may place hanging toys above the nest. If you do so, the toys should be hanging above baby's legs.
4. A child will pay attention to the source of light and sound. Change the position of the nest so that your child could turn his/her head in various directions.
5. It is not recommended to keep your baby in the nest when breastfeeding. Use special nursing pillows for this.

Care Instructions

- ◆ Both fitted sheets and the band can be taken off: it should be delicately hand-washed, at maximum 30°C
- ◆ Recommended ironing is at a medium temperature (not exceeding 150°C)
- ◆ The fitted sheet with a zipper that can also be taken off, should be washed in a washing machine at the temperature not exceeding 60°C. DO NOT IRON!
- ◆ The foundation of the mattress and rollers should not be washed.

'Spavalica' nest mattress for newborns

Producer - manufactured for 'Mystic Nails ltd' by 'Oblakov' factory, Russia
